Everything at your fingertips

Alfa Laval's solutions for hygienic applications are the result of continuous innovation, and our dedicated efforts to meet the challenges faced by industries. With the Alfa Laval online catalogue, detail of our comprehensive product range can now be conveniently at your fingertips at all times.

Whatever you need, and wherever you are, Alfa Laval's components and expertise are always readily available through our network of over 1500 channel partners, supported by our own sales companies around the world.

Alfa Laval has a wide range of tools and resources to make life easier. Our online catalogue is easily accessible and updated regularly. We also offer the possibility to download 2D and 3D drawings. Go to www.alfalaval.com/high.

At www.alfalaval.com/biopharm you can download the comprehensive Q-doc documentation for our UltraPure portfolio.

Our channel partners also have access to a growing pool of resources at the Alfa Laval eBusiness portal, including full documentation, real-time stock availability and the opportunity to order and track shipments online. As well as being kept up to date on the latest developments through the InSight newsletter.

Discover a world of hygienic solutions at our dedicated portals:

Rubber materials

In order to obtain the longest possible lifetime for rubber seals it is essential to choose the right quality for the actual duty. Consequently when choosing rubber quality, the characteristics of the different rubber types should be considered. All product wetted rubber material are in conformity of FDA.

Rubber Ethylene Propylene

EP rubber is widely used within the food industry as it is resistant to most products used in this sector. Another advantage is that it may be used to a recommend max. temperatures of 100° - 150° F. However, there is one essential limitation, EP is not resistant to organic and non-organic oils and fats.

Acrylonitrile Butadiene Rubber, NBR

NBR is the rubber type most frequently used for technical purposes. It is quite resistant to most hydrocarbons, e.g. oil, grease and fat. It is sufficiently resistant to diluted lye and nitric acid and may be used to a recommend max. 150° - 200° F. As NBR is attacked by ozone it may not be exposed to ultraviolet rays and should thus consequently be stored so that this is avoided.

Silicone rubber, FVMQ

The most significant quality of silicone rubber is that it can be applied from temperatures below 50° - 58°F to approx. 180° - 256°F and still keep its elasticity. The chemical resistance is satisfactory to most products. However, undiluted lye and acids as well as hot water and steam may destroy silicone rubber. The resistance to ozone is good.

Fluorine rubber, FFKM

FFKM is often used when other rubber types are unsuited, especially at high temperatures up to approx. 180° - 256°F. The chemical resistance is good to most products, however hot water, steam, lye, acid and alcohol should be avoided. The resistance to ozone is good.

Hydrogenated acrylonitrile butadiene rubber, HNBR

HNBR is mechanically strong and normally resistant to ozone and strong oxidizers, animal and vegetable fats, nonpolar solvents, oils and lubricants, water and aqueous solutions. The recommend max. temperature is 100° - 166°F.

Perfluoroalkoxy polymer, PFA

PFA is very similar to FFKM, but opposite to those FFKM is thermo plastic and has minimal porosity. PFA has a very high mechanical strength which makes it a perfect choice when dealing with abrasive products. The PFA seal offers longer service intervals. The recommend max. temperature for the PFA seal is 100° - 150° F.

Technical Information

Product and chemical resistance of flexible rubber materials

The information below is intended as an aid in selecting the best rubber quality for an actual application. It is not possible to state any general lifetime of rubber seals as many factors influence it: chemical attack, temperature, mechanical wear etc. Extreme temperatures, even within the generally accepted limits, may worsen other kinds of attack and thus reduce the lifetime.

Suitability ratings

- 1 Unsuitable.
- Limited suitability.
- Normal suitability.
- High suitability.
- Not recommended for other reasons.

The table contains data which have been compiled from the results of our own tests and the recommendations of our raw material suppliers. The data should be considered as recommendations only and will be brought up to date from time to time. They are based on constant contact with the specified product.

In case of doubt or lack of information it would be advisable to consult us directly, which will enable us to investigate specific applications.

ompliance and certification

We can provide documented and certified compliance with a broad spectrum of relevant international and local hygiene standards, worldwide. This helps you Significantly reduce the engineering costs of setting up and operating standards compliant processing plants around the world.

Alfa Laval components covered by this catalog is designed to meet the hygienic design guidelines in the industry.

For special requests please contact your local Alfa Laval organisation

The mission of A SSI is to enhance product safety for consumers of food, beverages, and pharmaceutical products through the development and use of A Sanitary Standards and A Accepted practices. The A Symbol is a registered mark used to identify equipment that meets A Sanitary Standards for design and fabrication.

ATEX is based on the requirement of the European Directive also known as AT 5 100a , the equipment Directive. The name AT Atmospheres possible is commonly given to the framework for controlling explosive atmospheres and the standards of equipment and protective systems used in them

Alfa Laval doc includes:
- .1 certificate in accordance to 10 0 T
- Customer compliance declarations
- Surface finish conformity declaration
- Compliance to the regulation o. 1 5 00

CE marking is a mandatory conformity mark for products placed on the market in the European Economic Area . With the CE marking on a product the manufacturer ensures that the product conforms with the essential requirements of the applicable directives. The letters CE stand for Conformit  europ enne / European Conformity .

The ASME certification program is unique in the world, having resulted from widespread industry requested for standardization. It is the leading standard on how to design and build equipment and systems used in the production of biopharmaceuticals. It incorporates current best practices for enhancing product production efficiencies, lower development and manufacturing costs, and increase quality and safety, while complying with regulations. The certification mark with a designator indicates that components bearing the mark have been manufactured and certified by ASME certificate Holder.

Sanitary fittings and tubes

The complete line

Performance in good hands

Working with hygienic applications is a question of care, attention to detail and dedication to outstanding performance. Alfa Laval has a proven track record in delivering superior safety, gentle efficiency and uncompromising cleanliness.

In fact, Alfa Laval has the world's broadest portfolio of components and solutions for the food, dairy, beverage, biotech, pharmaceutical and personal care industries. We draw on decades of experience in coming up with innovative and hygienic solutions based on our key technologies of separation, heat transfer, fluid handling, as well as tank equipment and installation material.

We create real value throughout your processes by helping you to optimize your processes, providing reliability, uptime, fast access to replacement parts and service. All this is readily available through our local offices and more than 1,500 sales and working partners around the world.

Here you will find an overview of Alfa Laval tubes and fittings for hygienic applications. For complete technical details and product specification, contact your local Alfa Laval supplier or visit us at www.alfalaval.com

Unions, clamp fittings and flanges

In order to sustain high quality, it is important that the products are uniform. Therefore tolerances and finishes are carefully controlled. Alfa Laval follows developments in the area of standards.

To enable you to select the best quality rubber seal for your process, Alfa Laval is able to offer various options in addition to its standard seal, including:

- NBR, Nitrile Rubber
- FPM, Fluorine Rubber
- EPDM, Ethylene Propylene
- Nitrile (Buna-N)
- White Nitrile (White Buna-N)
- Viton ®
- PTFE
- Silicone (Q)

Flanges and clamp fittings are suitable for flexible and easy maintenance. Flanges and clamp fittings with finger nuts are especially suited for processes where the load on seals is extra high, where easy control and replacement of seals is necessary and where optimal cleaning is required.

Unions are available in a number of standards, including SMS, ISO, BS, IDF, DS, DIN and clamps.

Alfa Laval's program of bends, tees and reducers are available in diameters from 1" to 4" and from DN10 to DN150.

Bends, tees and reducers

Alfa Laval constantly focuses on producing installation material with long durability, problem-free welding and assembly, and highest possible strength. Key criteria in the manufacturing process include tight tolerances, a variety of finishes and uniform wall thickness.

Welding

Alfa Laval is aware of the constantly increasing demands for the quality of welding. In accordance with these demands, all our weld end fittings meet the highest of standards.

The reducers have welding ends and are available for all tube combinations, ensuring you the right diameter and wall thickness for your process.

Tolerances

Alfa Laval ensures that all the angles are exact and that all the tube, bend and tee connections are uniform. It is very important that you do not have to compensate for any welding irregularities.

Finishes

In order to ensure that you are able to select a finish that exactly matches your process, Alfa Laval offers a wide range of finishes, including matt, raw, bright and polished.

The right part for your application

Alfa Laval provides many different standards of tubes and fittings. This means you can always find the part most suitable for your specific application, with exactly the process quality you need.

Sanitary range tubes and fittings

This product range provides a wide range of tubes and fittings with internal surface finishes that have a Roughness average (Ra) of $<0.8\text{--}1.6\ \mu\text{m}$. Tubes and fittings in the Sanitary range comply with DIN 11850, ISO 2037, BS 4825, JIS G 3447 and ASME dimension standards.

Tri-Clover BioPharm range tubes and fittings

The Tri-Clover BioPharm product range includes a comprehensive selection of tubes and fittings with internal surface finishes with a Roughness average (Ra) of $<0.4\text{--}0.8\ \mu\text{m}$, either electropolished or mechanically polished.

Tubes and fittings in this range comply with DIN 11850, ISO 1127 and ASME BPE dimension standards.

Tubing

Alfa Laval offers a variety of tubes for the sanitary application process in all worldwide standards.

A flexible pipe support system is also included in the Alfa Laval product program. The system can be used for floor, wall or ceiling installations, by means of a combination of connection pieces and anchor plates.

Tri-Clover BioPharm tubes

The Alfa Laval tubes are the perfect choice for ultra-clean processes within the demanding pharmaceutical, biotech and light chemical industries.

The tubes are produced in compliance with the DIN 11866, ASME BPE, ISO 2037 and BS 4825, with extremely high demands on materials, hygiene and manufacturing accuracy.

Whatever your sanitary application, Alfa Laval is able to supply the right tube.

Tri-Clover BioPharm packages

Alfa Laval is your complete source for specialized tubing and fittings required in biotech and pharmaceutical process applications. The quality and surface finish of the Tri-Clover BioPharm products match the exact requirements of the industry. So regardless of your installation material needs, we are able to supply you with the right product – making sure that your process quality is never compromised.

Tri-Clover BioPharm tubes and fittings

Tubes and fittings in the BioPharm range are manufactured in accordance with extra-strict quality assurance procedures.

All cold-formed BioPharm tubular products feature consistent wall thicknesses as a result of the use of fabrication-grade tubing. Once cold forming has been completed, these tubular products are resized to ensure that their ovality always falls within the prescribed tolerances.

A machined square-cut method is used to provide properly finished end facings, ensuring the most accurate, consistent orbital welds. All fittings are inspected visually, while ovality and squareness tolerances are inspected with calibrated equipment. All surface finishes are inspected with a calibrated profilometer to measure the Roughness average (Ra).

Tri-Clover BioPharm.

The quality and surface finish of the Tri-Clover BioPharm products are determined to match the exact requirements of the industry.

Alfa Laval Installation material

Alfa Laval is your complete source for specialized fittings and tubing required in food, dairy, beverage, personal care, biotechnology and pharmaceutical process applications. Smooth, crevice free interiors and secure, self aligning joints are characteristic for Alfa Laval Fittings. Each offers superior corrosion resistance and unmatched service life. Alfa Laval fittings are designed and manufactured to ensure dimensional accuracy and structural integrity, making them easy to install. Tubing is manufactured to Alfa Laval's stringent specifications, making it a perfect match for the weld fittings. Choose from a wide range of tube sizes, surface finishes and connect options. All products are labelled with a bar code, product information and manufacturing date. This provides the optimum identification and ensures that the product arrives to the job site in a clean orbital weld condition.

The Alfa Laval tubes and fittings are divided into two product ranges, Hygienic and Ultra pure. The Hygienic range is suitable for most standard duties and the Ultra pure range is suitable for duties with extra high demands on hygiene and cleanability.

Hygienic range tubes and fittings

The Hygienic product range offers a wide range of tubes and fittings with an internal surface finish from $R_a < 0.8 \mu\text{m}$ to $R_a < 1.6 \mu\text{m}$. The Hygienic range has tubes and fittings according to ISO 11850, ISO 85 and ASME dimension standards.

Ultra pure range tubes and fittings

The Ultra pure product range offers a wide range of tubes and fittings with an internal surface finish from $R_a < 0.1 \mu\text{m}$ to $R_a < 0.8 \mu\text{m}$, either electro polished or mechanically polished. The Ultra pure range has tubes and fittings according to ASME dimension standard. The Ultra pure range is manufactured in compliance with the ASME standard. All tubes and fittings are internally cleaned and individually capped and bagged. All product wetted stainless steel products in the Ultra pure range are delivered with a Test Report or with a certificate in accordance to ISO 9001.

The Ultra pure range is manufactured under extra strict and thorough quality control methods. Wall thickness integrity is maintained through the use of fabrication grade minimum wall tubing for all cold formed tubular products. After cold forming, our tube product is resized to ensure that the ovality falls within the prescribed tolerances. End facing is provided with a machined square cut method. This allows for the most accurate and consistent orbital weld result. All fittings are put through 100% visual inspection and ovality and squareness tolerances are inspected with calibrated equipment. Surface finish is inspected with a calibrated profilometer to ensure the roughness average a maximum is not exceeded.

Service ratings are based on hydrostatic tests using standard molded Buna-N material gaskets, with proper installation of ferrules, assembly of joints and absence of shock pressure.

All ratings shown are dependent upon related components within the systems and proper installation. For temperatures above at 1 0° , we recommend using only 1 H clamps.

Intro

I Fittings and Tubes

Intro

After years of intensive work with the portfolio we have achieved a unique surface appearance across the different I Fittings of which we are very proud. We have uniformed our marking, to support our high quality Fittings and the result is fantastic. We call this range for " I Standard, new surface", to highlight it, and give it a special space in the new catalogue, because it truly is unique. With focus on simplicity we have reduced the surface appearances to two on machined and one on tubular Fittings and we have concentrated on "Hygienic Fittings" with an exception of I 1186 . We have invested heavily in availability of " I Standard, new surface" portfolio and supported by the new automatic warehouse in Kolding and our online ordering tool "Anytime", this will provide a superior customer experience. Moreover, we have divided the catalogue into the different I standards, to show the differences and make it easy to choose the right product.

The old portfolio is, where possible and convenient, upgraded to our " I Standard, new surface", the rest we have kept "as is". In the price files we have made the following split:

" I Standard, new surface"

"Fit to I Tubes"

The complete I Fittings range we supply fits with the tube dimensions of 10 5 A and I 11866 eihe A except from I 11851 W, which is according to the standard . The products in the chapter "Fit to I Tubes", have deviations from the I standards, but will still fit to 10 5 A tubes.

Thank ou for reading this and we hope ou en oy

roduct presentation

Alfa Laval's range of I Tubes Fittings are used in food, dairy, beverage, personal care, biotechnology and pharmaceutical process applications. Smooth, crevice free interiors and secure, self aligning oints are characteristic for Alfa Laval fittings. ach offers superior corrosion resistance and unmatched service life. Alfa Laval fittings are designed and manufactured to ensure dimensional accuracy and structural integrity, making them easy to install. Tubing is manufactured to Alfa Laval's stringent specifications, making it a perfect match for the fittings. All products are labelled with a bar code, product information and manufacturing date. This provides the optimum identification and ensures that the product arrives to the ob site in a clean orbital weld condition. n the product we have laser marked all the needed information such as heat number, dimension, surface, material and country of origin.

I Standard, overview

Product	I Standard	Surface ¹	Material	Application	Part
Tubes	10 5	, ,	1. 0 0 L	Hygienic	
	A I 11850	and	1. 0 16L

			1. 0 16L		: lamp connection

¹ Surface table is available later in the document

Material is according to 10088 1. Regarding complete connections, it is always in 1. 01. A unit in 1. 0 is available as a single item. We hold the right to deliver better material than stated in our brochures and order confirmation. Meaning, if stated 1. 01, it is allowed for us to deliver 1. 0 or 1. 0 , at same price of course.

We do currently not offer this part of the I standard

Standard	Material	Symbol	Surface			Heat Treatment
			External surface and Welded area	Internal surface	Internal Welded area	
10 5 A I 11850	1. 0 0 L	H	pickled and passivated	a < 0.8 µm	pickled and passivated	o
			pickled and passivated or right annealed	a < 0.8 µm	pickled and passivated or right annealed	
I 11866 A	1. 0 16L	H	pickled or right annealed without a requirement, or polished to a < 1.0 µm	a < 0.8 µm	a < 0.8 µm	es
			pickled and passivated or right annealed	a < 0.8 µm	pickled and passivated or right annealed	

Sizes

We supply 10 5 A which has the same dimensions as former I 11850reihe, and I 11866 A.

Please also notice "nominal size" is not always equal to inner diameter see 15, 5, 0, 65 and 80. The 10 5 A standard is only referring to outer diameter. All dimensions in this catalogue are in millimeter.

nominal size only I 11866	outer diameter	I inner diameter	t wall thickness
10	1	10	1,5
15	1	16	
0		0	
5		6

10 5 A | 11850

The stainless steel tubes in this standard are for the food, chemical and pharmaceutical industry.

Typically used with | 1185 , | 11851, | 1185 and | 6 6.

and tubes are annealed, whereas and tubes are pickled and passivated internal and external

All materials according to 10 1 .

| 11866

The stainless steel tubes in this standard are for aseptic, chemical and pharmaceutical industry.

Typically used with | 1186 and | 11865.

All tubes are annealed, pickled and passivated in accordance with | 10 1 W Ab.

comment to | 11851 W

Regarding connections | 11851 W expanding, this is the only product in this catalogue which does not match tube 10 5 A from sizes up to 50, above 50 they fit. This standard is meant for the old " | 11850, Reihe 1".

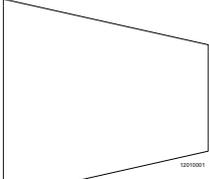

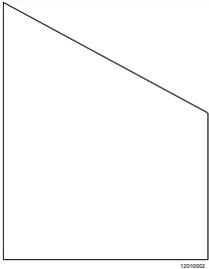

| 11850 Reihe 1, different measures up to 50:

dimensions	10	15	20	25	30	35	40	50
	1	18			8		0	5
	10	16	0		6		8	50

		blind ale						Alfa Laval does currently not offer this real design name is " "
		blind ewindestutzen						
		blind Liner						The real design name is " " but Alfa Laval has chosen to call it " ". The blind is not expanded or welded to the tube, therefore it can be used for all connection versions in I 11851
		blind Kegelstutzen						
		ut						
		ut berwurfmutter		F				Used for all connection versions in I 11851
		asket						
		ichtring						Used for all connection versions in I 11851

A complete connection is ale Liner asket ut. It is possible to blind from Liner side. lease do not mix connection W with connection S.

The " onnection ame" equal to W, is from the erman word, Walzen, which in nglish is translated to xpanding.

The " onnection ame" equal to S, is from the erman word, Schweissen, which in nglish is translated to Welding.

The " onnection ame" equal to SK, is from the erman word, Schweissen, Kurz, which in nglish is translated to Welding, Short.

AL	S	50	HSF0	1. 0	I 11851
Type ame	esign ame	ominal Size	Surface	aterial	Standard

We state this product group is for hygienic application, but please be aware it is using the same ring as 1186 which is for aseptic applications, the only difference between the two standards is the "build in length". " build in length" of I 1186 is longer than I 1185 , which makes it easier to perform orbital welding.

Marking

1.

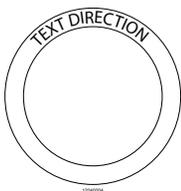

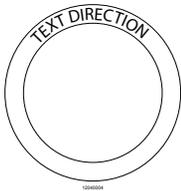

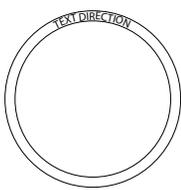

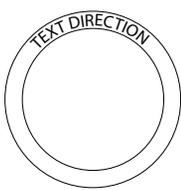

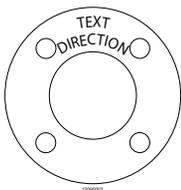

In Alfa Laval we have chosen to mark our product as shown in this chapter. The marking provides all the needed information and is placed logical on the products.

Tubular

Machined

Some of our machined products are very small and marking on the optimal place is impossible therefore we use "Secondary option" instead of "Primary option".

	Primary option	Secondary option	
Nut			<p>Dimensions: Outer diameter and wall thickness Inner nut and blanks the standard size is added. e.g.: for 1 : 1 : 50, For IS :</p> <p>Material type: Country of origin: AISI IS 166 1 AL HA code</p> <p>Font: Helvetica or Arial Font size: adjusted to the tube size</p> <p>Example on male part, liner, ferrule, and flange ALFA LA AL 0x .0 HSF0 1. 01 0 HT : 1 56</p> <p>Example on nut and blanks ALFA LA AL 0x .0 HSF0 1. 01 0 I HT : 1 56</p> <p>Example on secondary option, on nut, male part, liner and ferrule ALFA LA AL 0x .0 HSF0 1. 01 0 K HT : 1 56</p>

Surface descriptions

We have chosen to provide a limited choice, most used, of all the surface possibilities. We have given them an Alfa Laval name. The names and descriptions are like in the below table.

Our surface philosophy has been to create a uniform surface finish which meets the standard or better and at the same time fits with the outer surface appearance of the I tubes across all I Fittings. The range “ I Standard, new surface” will provide this benefit and will be visible in plants using Alfa Laval I Fittings only.

The new uniform appearance of all Alfa Laval I Fittings is also the reason for new surface descriptions. This is a unique product and therefore it deserves a unique surface description.

The surface on tubular fittings exceeds the requirement in I 1185 . We are meeting the requirements to surface roughness in H and A. Our customers are therefore buying a product with a better surface roughness than most of the market supplies.

Polished Fittings

AL description	Standard	Surface texture μm μ inch	
		Wetted	not wetted
HSF0	I Hygienic	< 0.8	< 1.6 6
H	I Ultra pure	< 0.8	< 1.0 0

Tubular Fittings

AL description	Standard	Surface structure	Surface texture μm μ inch			
			Wetted		not wetted	
		I	Surface	weld bead	Surface	weld bead
HSF	I Hygienic	polished Shot blasted	<0.8	<0.8	<1.6 6	<1.6 6
HSF 1	I Hygienic	polished polished	< 0.8	< 0.8	< 0.8	< 0.8

¹For sizes larger than 100, the not wetted surface μa can be upto 1.0 μm . Tolerances according to I 1185

Our products are mechanical polished. Mechanical polishing is achieved by using a progressive series of abrasives, from low to high grit. This allows a consistent internal finish and both optimal and economical cleaning.

HSF is our tubular AT version. Inside it is polished to μa <0.8 and outside it is shot blasted to a surface μa <1.6

Test procedure

1.

Our manufacturing facilities operate under an approved ISO 9001 quality standard. Wall thickness integrity is maintained using fabrication grade minimum wall tubing for all cold formed tubular products.

Our fittings are put through visual inspection and ovality and squareness tolerances are inspected with calibrated equipment. Surface finish is inspected with calibrated profilometer to ensure the roughness average a maximum is not exceeded.

Certificates

All product wetted stainless steel products are delivered with a .1 certificate in accordance to ISO 9001. You can find the certificates here: <https://heatbase.alfalaval.com/certificates>

Packing

We protect our products by packing them into high quality cardboard boxes. This ensure they keep the high quality during storing and transportation.

Packing sizes as below:

10 - 80 - 10 pcs per cardboard box

100 - 5 pcs per cardboard box

100 - 1 pcs per cardboard box

Rubber**Rubber materials**

In order to obtain the longest possible lifetime for rubber seals it is essential to choose the right quality for the actual duty. Consequently when choosing rubber quality, the characteristics of the different rubber types should be considered. All product wetted rubber material are in conformity of FDA.

Rubber ethylene propylene

EPR rubber is widely used within the food industry as it is resistant to most products used in this sector. Another advantage is that it may be used to a recommend max. temperatures of 100° - 200° F. However, there is one essential limitation, EPR is not resistant to organic and non organic oils and fats. The resistance to ozone is excellent.

Acrylonitrile butadiene rubber,

NBR is the rubber type most frequently used for technical purposes. It is quite resistant to most hydrocarbons, e.g oil, grease and fat. It is sufficiently resistant to diluted lye and nitric acid and may be used to a recommend max. 50° - 200° F. As NBR is attacked by ozone it may not be exposed to ultraviolet rays and should thus consequently be stored so that this is avoided.

Silicone rubber,

The most significant quality of silicone rubber is that it can be applied from temperatures below 50° - 58°F to approx. 180° - 56°F and still keep its elasticity. The chemical resistance is satisfactory to most products. However, undiluted lye and acids as well as hot water and steam may destroy silicone rubber. The resistance to ozone is good.

Fluorine rubber, F

FFKM is often used when other rubber types are unsuited, especially at high temperatures up to approx. 180° - 56°F. The chemical resistance is good to most products, however hot water, steam, lye, acid and alcohol should be avoided. The resistance to ozone is good.

Hydrogenated acrylonitrile butadiene rubber, H

HNBR is mechanically strong and normally resistant to ozone and strong oxidizers, animal and vegetable fats, nonpolar solvents, oils and lubricants, water and aqueous solutions. The recommend max. temperature is 100° - 266°F.

Perfluoroalkoxy polymer, PFA

PFA is very similar to TFE, but opposite to those PFA is thermo plastic and has minimal porosity. PFA has a very high mechanical strength which makes it a perfect choice when dealing with abrasive products. The PFA seal offers longer service intervals. The recommend max. temperature for the PFA seal is 100° - 315° F.

Product and chemical resistance of flexible rubber materials

1.

The information below is intended as an aid in selecting the best rubber quality for an actual application. It is not possible to state any general lifetime of rubber seals as many factors influence it: chemical attack, temperature, mechanical wear etc. Extreme temperatures, even within the generally accepted limits, may worsen other kinds of attack and thus reduce the lifetime.

atings

- 1 Unsuitable.
- Limited suitability.
- ormal suitability.
- High suitability.
- ot recommended for other reasons.

The table contains data which have been compiled from the results of our own tests and the recommendations of our raw material suppliers. The data should be considered as recommendations only and will be brought up to date from time to time. They are based on constant contact with the specified product.

In case of doubt or lack of information it would be advisable to consult us directly, which will enable us to investigate specific applications.

According to 10088 1

The material names 0 , 0 L, 16 and 16L according to AISI SA

We do not offer 1. 5, we have chosen 1. 0 instead. Both materials are designed for highly corrosive environments. Material 1. 5 has due to the higher content of Chromium and Nickel a better corrosion resistance and formability than 1. 0, it also has a significantly higher price. Our many years in the Installation Material business has proven 1. 0 as the best match for our customers processes.

Treatment of stainless steel

We will shortly touch two of the most important areas:

1. Heat treatment
2. Chemical surface treatment

Heat treatment

Processes where you are heating the metal to a certain temperature, which will make the atoms migrate in the in the crystal lattice.

We will focus on the most important.

Annealing

A process where the metal is heated to a temperature around 1050° - 1150° , kept there for a specific time and then cooled at a very slow and controlled rate. The process is used to:

- ° Reduce hardness
- ° Increase ductility
- ° Release mechanical stresses

After annealing the metal is more workable.

Chemical surface treatment

To understand why we do surface treatments, it is important to understand the role of the passive layer

The passive layer is a thin invisible oxide film most important are the chromium and iron oxides , which protects the steel from its surroundings, and therefore from corrosion. If the layer is locally broken, for example by a scratch, it will, under normal conditions clean surface and enough oxygen , naturally self passivate, and thereby restore the ability to avoid corrosion. Stainless steel's ability to have this in built self repairing corrosion protection system, is what we benefit from.

In some cases, typically after reworking the steel, we need to help the steel to restore the oxide film, here the surface treatment is important. The good thing is, stainless steel treated in the right way and not exposed above its "chemical strength", will last very long. On the other side, if the "rules" working with stainless steel are not followed or the stainless steel is placed in an environment above its "chemical strength", the oxide layer will "break" and corrosion will start, once the corrosion has started it will proceed very fast.

The two most common mentioned chemical surface treatments are "pickling" and "passivation"

Pickling

A process where the metal is put into an acid bath typically 15% nitric acid and 5% Hydrofluoric acid . Time and temperature of the bath is depending by the case. Pickling is used to remove weld heat tinted layers from the surface. A thin layer of metal is removed by the process and cleaning the steel, after the process the steel has totally lost its oxide film, but after flushing with water it will automatically be reestablished. It will take up to 24 hours before the layer is as robust as before the welding process.

Passivation

When the surface is clean the passivation (reestablishing the oxide film) , is happening automatically, but as discussed above it will take some time before the layer has the natural strength. This can be forced to happen very fast by a chemical passivation. The passivation bath is one type of acid normally 20% nitric acid . No metal is removed from the surface and the surface roughness is not changed, only the passive layer is strengthened.

Alfa Laval Unique Flexbody

Instrumentation Accessories

1.6

Introduction

The Alfa Laval Unique Flexbody is a flexible in line platform or housing to fit instruments or sight glasses into hygienic fluid processing lines. It easily fits into any piping system to enhance process monitoring and control. Up to two instruments or sight glasses can be positioned in any pipeline. Its simple, no dead zone design makes the Unique Flexbody easy to use, maintain and clean.

Application

The Alfa Laval Unique Flexbody is designed to enable various instruments or sight glasses to be installed into any pipeline in hygienic applications across the dairy, food, beverage, brewery and pharmaceutical industries.

enefits

- Improve control, measurement and visual inspection of your hygienic fluid process lines
- Higher productivity and profitability
 - nsure process hygiene due to ease of cleaning no dead zones, domes or sumps
- Two connection sizes fit all instrumentation and sight glasses
 - asy to remove, clean, calibrate and maintain instrumentation or sight glasses

Standard design

The Unique Flexbody consists of hygienic stainless steel in line housing, two o rings, and a choice between either a blind cap and one sight glass or two sight glasses. It can be welded into any piping system with various pipe diameters. The process connection can be sealed with the hygienic blind cap when instrument or sight glass is not attached.

Working principle

The Unique Flexbody has two openings to accommodate two instruments or sight glasses at the same time. When one or both of the openings is not being used for measurement or visual monitoring, hygienic blind caps can seal the process connections.

T H I A L ATA

Temperature	
Temperature range:	5 - 10 °

Pressure	
Max product pressure:	10 bar
In product pressure:	full vacuum

Please note: apply the relevant temperature and pressure ranges of the instrumentation that is applicable

Selection guide	
Select the option Unique Flexbody or Unique Flexbody with sight glasses	
Choose the size of the piping.	

Standard configuration	
The Unique Flexbody has two main configurations	
The Unique Flexbody includes a housing, one blind cap, one sight glass, clamp rings and rings	
The Unique Flexbody with sight glass includes a housing, sight glasses, clamp rings and rings.

This is Alfa Laval

Alfa Laval is active in the areas of Energy, Marine, and Food & Water, offering its expertise, products, and service to a wide range of industries in some 100 countries. The company is committed to optimizing processes, creating responsible growth, and driving progress – always going the extra mile to support customers in achieving their business goals and sustainability targets.

Alfa Laval's innovative technologies are dedicated to purifying, refining, and reusing materials, promoting more responsible use of natural resources. They contribute to improved energy efficiency and heat recovery, better water treatment, and reduced emissions. Thereby, Alfa Laval is not only accelerating success for its customers, but also for people and the planet. Making the world better, every day. It's all about *Advancing better™*.

How to contact Alfa Laval

Contact details for all countries are continually updated on our web site. Please visit www.alfalaval.com to access the information.
